

Book and Author MGMT System

You are required to design two classes:

Author Class

```
The Author class should contain the following private data members:  
- name (String)  
- email (String)  
- gender (char) → either 'm' or 'f'
```

Constructor : A constructor should initialize all the attributes.

Book Class

```
The Book class should contain the following private data members:  
- name (String) → book title  
- author (object of class Author)  
- price (double)  
- qtyInStock (int)
```

Assume each book has exactly one author.
Required Member Functions

Implement the following getters and setters:

```
getName()  
getAuthor()  
getPrice()  
setPrice()  
getQtyInStock()  
setQtyInStock()
```

Note:

- No setter should exist for name
- No setter should exist for author

Task

```
Using the classes above:  
  
Create an Author object  
Create a Book object using that Author  
Print the following details:  
Book name  
Book price  
Quantity in stock  
Author name  
Author email  
Author gender
```

Input Format

Two lines of input will be provided.

```
authorName authorEmail gender
bookName price quantity
```

Constraints

$1 \leq \text{quantity} \leq 10^5$

$0 \leq \text{price} \leq 10^6$

$\text{gender} \in \{m, f\}$

Name length ≤ 50

Output Format

Print the details in the following format:

```
Book Name: <bookName>
Price: <price>
Quantity: <quantity>
Author Name: <authorName>
Author Email: <authorEmail>
Author Gender: <gender>
```

Sample Input 0

```
Rahul rahul@gmail.com m
JavaBook 500 10
```

Sample Output 0

```
Book Name: JavaBook
Price: 500
Quantity: 10
Author Name: Rahul
Author Email: rahul@gmail.com
Author Gender: m
```
